

Warranty Policy — X-Series Controllers and S-Series Sensors

Document ID: DOC-WAR-POL-001 | **Revision:** 6.0 | **Effective date:** 2024-01-01 | **Classification:** Customer

Issued by: IndustriOS Dynamics Ltd., Vondelingenweg 601, 3196 KK Rotterdam, The Netherlands

Applies to: all products delivered from 2019-06-01 onwards

1. Purpose and Scope

This policy defines the warranty terms for IndustriOS Dynamics Ltd. hardware: X-Series controllers (X100, X200, X300), S-Series sensors (S200, S350), and original accessories (IOM-X modules, X-EBS bus components, connectors). The warranty period starts on the delivery date (Incoterms DAP) recorded on the invoice. The warranty is transferable: if the device is resold, the remaining term continues from the original delivery date, and the new owner may register ownership in the Customer Portal.

2. Warranty Duration by Product

Product	Standard warranty	Extended warranty	Registration window
X100 controller	12 months	not available	-
X200 controller	24 months	36 months	30 days from purchase
X300 controller	36 months	not offered (already maximum)	-
S200 sensor	18 months	not available	-
S350 sensor	18 months	not available	-

3. Extended Warranty Registration (X200 only)

The X200 extended warranty extends coverage from 24 to 36 months at no charge, provided the device is registered within 30 days of purchase. Registration is completed in the IndustriOS Customer Portal by entering the serial number (format IOS-XX-NNNNNN) and the delivery date from the invoice; the portal sends an activation confirmation by e-mail within two working days. The 30-day window is calculated from the purchase date, not the installation or commissioning date. Registrations submitted on day 31 or later are rejected automatically — there is no grace period and no manual override. The extended term applies only to units purchased new from IndustriOS Dynamics or an authorised distributor.

4. Exclusions

Warranty claims are denied for the following causes:

- Water damage to devices not rated IP68. The X100 (IP54) and X200 (IP65) are excluded for immersion, jet, and splash damage; S-Series sensors (IP68) are covered unless ingress is traced to a damaged or incorrectly torqued connector.
- Unauthorized repair, modification, or opening of sealed housings by anyone other than IndustriOS Dynamics or an authorised service partner. For the X300 this additionally voids the SIL2 certificate.
- Supply voltage, overvoltage, or lightning events beyond the tolerance stated in the product manual (for example, outside 43.2-52.8 VDC on the X200).
- Use of unsupported firmware: pre-release or beta firmware outside the enrolled beta program.
- Wear beyond rated lifetime: relay contacts (100,000 cycles), RTC batteries (5 years), and gaskets (five opening cycles).
- Installation contrary to the manuals: insufficient clearance, missing filters, ambient temperatures above the specified limits.
- Cosmetic damage and faults caused by customer-loaded project software.
- Shipping damage where the carrier was chosen by the customer against packaging instructions (see DOC-RMA-FAQ-001).

5. RMA Process

1. Obtain an RMA number via the Customer Portal or support@industrios-dynamics.com, providing the serial number, purchase order, firmware version, and a fault description. RMA numbers are issued within 4 business hours and are valid for 30 days.
2. Ship the unit to the Rotterdam facility (Vondelingenweg 601, 3196 KK Rotterdam, The Netherlands). In-warranty EU customers receive a prepaid return label.
3. Evaluation is completed within 48 hours of receipt at goods-in. The customer receives a report stating the confirmed fault, the warranty decision, and — for out-of-warranty units — a repair quote.
4. In-warranty repairs are completed within 5-7 working days after evaluation. Spare parts for all models shipped since 2019 are stocked in Rotterdam.
5. The repaired unit is returned with a 90-day warranty on the repair itself.

Dead-on-arrival units (failure within 14 days of delivery) qualify for an advance replacement: a refurbished or new unit ships before the defective unit is returned.

6. Out-of-Warranty Service

Evaluation of out-of-warranty units is free of charge. Repairs are quoted before any work starts (185 EUR per hour labour plus parts) and carry the same 90-day repair warranty. Loaner units from the X200/X300 pool are available for a maximum of 21 days, subject to availability; the 150 EUR administration fee is waived for customers with a confirmed repair order.

7. Claims Documentation

A complete claim contains: proof of purchase, the serial number, a fault description with the first occurrence date, the firmware version, the last maintenance record, and photographs for shipping-damage claims.

IndustriOS Dynamics responds to warranty claims within 5 business days. Fraudulent claims (for example, serial numbers transplanted between housings) void the warranty of all devices involved and may be reported to the authorities.
